“Remote-controlled robots weighing no more than 15 pounds became gladiators for a day in an arena at the Washington County Fair. Each robot is designed by students and made from scratch, meaning that most parts are made by students and then assembled by the team. Simply buying a pre-made kit would not meet the competition’s educational objectives. This arena game hides science, engineering, mathematics, metal fabrication and computer design lessons under the cloak of a good time.”
Milwaukee Journal/Sentinel, July 26, 2008
 By Don Behm

“Building a combat robot involves all steps of the manufacturing process. We need to attract young people to manufacturing careers in Wisconsin.”
 Pat Yunke
 Milwaukee Area Technical College

“I need employees with hydraulic & electronic aptitude or experience. I hired my latest employee solely because he listed BotsIQ Club on his resume. He is working out great.”
 Bill Gilbert
