

Dear MSC/J&L Metalworking, and Tool, Die, and Machining Association of Wisconsin,

My name is Ryan Riebe, I am a full time student at Moraine Park Technical College and am currently in the CNC program. I am very grateful for the toolbox. It helps out a lot in my journey to become a cnc operator. I am hoping to get a cnc apprenticeship once I am done with school or find a traditional apprenticeship while I am still in school. I am currently working at a tool in die shop in Germantown called MGS. They consider what I do a long term interview for an apprenticeship, which basically means I clean for four hours a night. When we have breaks for school and we can work more hours I put in forty hours a week and am working on a mill or drill press for about four hours a day. I also work twelve hour shifts at Quad Graphics in Lomira on Saturday and Sunday. The reason I work as much as I do is because I am paying for school out of my own pocket. So far it has been working out ok, but it can be difficult trying to put together a tool kit as well. So for the help with that I am so grateful. That toolbox will be with me for the rest of my life and has already helped out a lot in my journey.

Thank You Again,

Ryan Riebe
